1. **E22** Monitor’s engine- It was classified as the vibrating side lever engine. It weighed 30 tons and had 400 horsepower.

2. **A1** Monitor’s anchor- It weighed about 1,350 pounds and was recovered in 1983 approximately 495 feet south-southwest of the bow of the ship.

3. **E/F 27/28** Monitor’s propeller- It had four blades and it weighed about 4,600 pounds. It had cast iron screws that were 9 feet in diameter.

4. **H24** Monitor’s Turret- It is 22 feet in diameter and 9 feet tall, it was constructed of eight 1 inch iron plates. It weighed 120 tons and was able to rotate with the help of two steam engines that used a crank to turn four gears.

5. **K22** Monitor’s Lantern- It was used as a distress signal towards the USS Rhode Island which was towing the USS Monitor in the Atlantic Ocean off Cape Hatteras, North Carolina.

6. **E23** Monitor’s Engine Register- The middle disk has six rectangular spaces where numerical digits could be seen. This showed how many hours the ship engine had.

7. **H25** Buttons- That were found in the turret, they could have come off anything like shirts and even underwear!

8. **G24** Shoes- A single brown boot that probably belonged to an officer, which was left behind during the Monitor’s sinking.

9. **H8** Mustard condiment bottles, which were found along with plate fragments.

10. **I23** Silverware-engraved with the initials of the crew

11. **E/F 3** Anchor well-where the anchor was tied up when the ship was underway

12. **B-H 11-15** Crew Quarters-Area where the crew resided

13. **A-F 7-10** Officer’s Quarters-Area where the officer’s slept.

14. **E6** Pilot House- Where the captain would sit to pilot the Monitor
